

ISSIS™ (Integrated Social Services Information System) is a fully customized, highly available, and scalable integrated case management solution that supports Human Service agencies data management needs.

ISSIS was designed from the ground up to integrate a client's case data and services. Now it is easier than ever to manage all aspects of a client's record. ISSIS enables Human Services agencies the ability to organize their case data in an integrated manner, providing more efficient management of services and case data for families with a single centralized case manager.

Tech S2 licenses ISSIS to Human Services agencies to provide their case workers the ability to manage services provided to families from within a single software application.

Improving support services for children and families through innovative technology

Tech S2 offers a full-range of professional software development services, from entirely new systems to feature enhancements, including enterprise application development, systems integration, database design, programming, and complete web design and development.

With expert technical knowledge, and over 30 combined years experience working with business, academia, government, and nonprofits, Tech S2 can guide you in all your technology needs.

**Integrated Services and
Case Management
Software for Human
Services Agencies**

ISSIS™ is a product of Tech S2, Inc.

ISSIS™ Features

- **Integrated centralized database** – with Common Application Form, for centralized intake across all categoricals. Includes data elements for C&Y, MH, MR, Aging, VA, D&A, and others.
- **Legacy categorical database bridging** – keep using your legacy software while using ISSIS™ as you develop your vision of integration.
- **Integrated security** – supports data confidentiality, with HIPAA compliant role-based security model.
- **Customizable** – to your needs and vision of integration, with agency specific enhancements and features.
- **Real-time access to data** – in the office or in the field, anytime, anywhere.
- **Modular** – purchase only the modules you need, when you need them. Add others later.
- **Reports** – provides customized reports based on your needs. AFCARS and other required reports are included.

ISSIS is comprised of:

- Common application form.
- Integrated database
- Categorical data bridging software
- Agency defined reports
- Integrated security model with users and roles
- Client software capable of running over the web, desktop PC's, tablet PC's, PDA's or Smart Phones.

Transitioning a human services agency from a categorical to an integrated model requires both departmental and data re-organization, hand-in-hand, to achieve the goal. Careful consideration and planning must occur so that while an agency is being evolved it can continue to provide value to its clients, while moving towards its ultimate goal of integrated support services and case management.

Transitioning from categorical to integrated systems?

ISSIS –

- Understands the requirements and workflow of transitioning a human services agency to an integrated model.
- Is configurable, and is able to be adapted quickly and easily so your agency can operate in a categorical model, an integrated model, or any point in between.
- Features the ability to expand and grow as a human services agency evolves towards an integrated model.
- Cooperates with legacy categorical software systems so that case managers and administrators can continue to utilize those systems while migrating towards their vision of integration on their timeline with ISSIS™.
- Integrates with CaseScribe, for automatically transcribing a case worker's voice notes.
